

Amendments to the Specification:

Please replace the paragraph beginning at page 5, line 3, with the following redlined paragraph:

The underside of the plate 2 carries further sets of components labeled 16 in Figure 1. An interface connector 18 in the form of a plug is used to guide all tracks from the underside components 16, via pins in the ~~conneector support pillar~~ 8. In addition a set of conductive tracks connect at least some of the pins in the topside connector 14 to the underside connector directly, rather than via the circuit components. The topside and underside connectors are surface mounted, and the conductive tracks directly connecting them extend through the plate.
